

# Better Value Drug Management List

**FOR MORE INFORMATION, PLEASE CONTACT:**

Many medications on the market today do not represent therapeutic advances or add value for our clients. Pharmaceutical companies find new ways of extending their patents and charging more. Other drugs may require a prescription but are used to treat conditions not typically covered by insurance.

## Safe and effective clinical alternatives

The Amwins Rx Better Value Drug Management List excludes high cost drugs that are on the market but have safe and effective clinical alternatives that are available at a much lower cost. Drugs on this list include new formulations, high cost combinations, highly inflated products and drugs that are not FDA approved.

Non-essential drugs are excluded at point-of-sale and members are directed to use less expensive formulary alternatives.

Plans utilizing this program can expect to realize approximate savings of \$1.28 PMPM and quarterly reporting is available that details actual savings.

## Case studies: actual patient savings realized by Amwins Rx clients

 Medication excluded	 Reason for Use	 Plan Annual Savings
Glumetza	Diabetes	\$57,240.00
Zegerid	GERD	\$47,272.00
Treximet	Migraine	\$10,092.00
